
QUALITY AND ENVIRONMENTAL POLICY

Quality Policy

Responsibility for Quality

The top management and the employees are responsible for quality and committed to continual improvement.

Quality is the Result of Planning

Quality requirement is planned for the entire manufacturing processes to achieve customer satisfaction.

Quality is Manufactured

Production units are responsible for the respective manufacturing quality, with support from human resource management, facilities, process and document control.

Environmental Policy

Environmentally-compatible Products

The environmental factors are assessed during product design and development stage through striving for usage reduction, recycle and re-use of resources.

Environmentally-friendly Production

Advanced technologies with integrated environmental protection components are adopted in the production processes, with reduction in resources consumption.

Training and Protection of Staff

Employee awareness of the environmental responsibilities is enhanced through training and motivation programme. Employees are committed to continual improvement on safety and health protection.

Binding Partnerships

Environmental requirements are fulfilled by working closely with suppliers. Appropriate waste handling until the final disposal is achieved by co-operation with contractors.

Environmental Management and Controlling

The management ensures that the environmental related guidelines, legal and administrative requirements are fulfilled. The environmental system and objectives are constantly being monitored for achieving continual improvement.
